CODERS CLUB PRESENTS

AI Agent Orchestra

A 3-day event to educate students and make them aware of agentic development.

PARTICIPANT'S GUIDE

Open the book →

Welcome, participant

Take your seat in the orchestra.

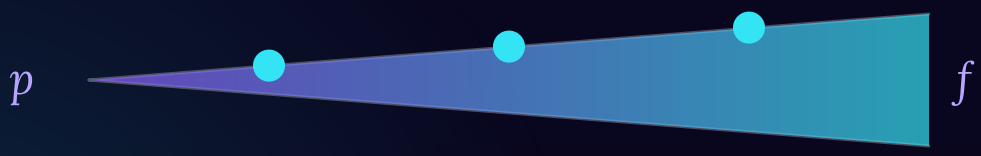

AI Agent Orchestra is a Coders Club event for students. Over three days you learn how AI tools, chatbots and agents differ, then build and conduct an AI agent of your own.

I **A working portfolio prototype**
Turn prompts into interfaces on Day 1.

II **How an AI workflow fits together**
See trigger, AI, decision and action connect on Day 2.

III **A demo you built with a team**
Present an AI-powered prototype on Day 3.

```
// learn it.
// connect it.
// conduct it.
```

Day 1
Learn + Create

Day 2
Understand + Connect

Day 3
Build + Present

The score

Three days, three movements.

Each day builds on the one before. The music swells from your first prompt to a live demo.

I

Movement I · Learn + Create

Day 1: From Prompt to Portfolio

Meet the AI tools, take the UI recreation challenge and build a digital portfolio.

First half-day · about 3 hours (proposed)

II

Movement II · Understand + Connect

Day 2: From Chatbot to Agent

Learn what makes an agent, watch a live workflow and run a mini experiment.

About 2 hours (proposed)

III

Movement III · Build + Present

Day 3: Conduct Your Own AI Agent

Form a team, build and test a prototype, then present it live.

Full day (proposed)

Dates and venue are announced once the plan is approved. The days can also run separately if a continuous 3-day event is not possible.

Movement I · Day 1

From Prompt to Portfolio

First half-day · about 3 hours (proposed)

AI tools overview

AI tools for coding, design and productivity, plus reference UI websites. How to prompt AI to generate and refine web interfaces.

UI recreation challenge

Recreate or improve a given website design with AI tools. Focus on layout, typography, colours, responsiveness and interactions.

Digital portfolio

Build a personal portfolio that shows your projects and skills. Follow the reference or make your own version.

Timed challenge. Winners are chosen on the best web development outcome. The best implementations are showcased.

An example prompt

```
Build a responsive portfolio page.
Dark theme, serif headings, a hero with my name,
three project cards and smooth hover effects.
Make it work well on a phone.
```

Outcome

A working portfolio prototype and practical experience turning prompts into interfaces. The Day 1 Handbook in your resources walks you from zero to a finished page.

Movement II · Day 2

From Chatbot to Agent

About 2 hours (proposed)

Trigger --- AI --- Decision --- Action

AI chatbots vs AI agents

What makes an agent different from a chatbot: models, tools, triggers, workflows and actions, with practical examples.

Live workflow demonstration

A visual automation tool such as n8n shows a simple trigger, AI, decision, action workflow. If feasible, a basic website or form connects to it, so one input gives a real, visible result.

Mini experiment

Modify a prepared workflow or prompt and test how different inputs change the output. See how validation and predefined rules control actions.

An example workflow

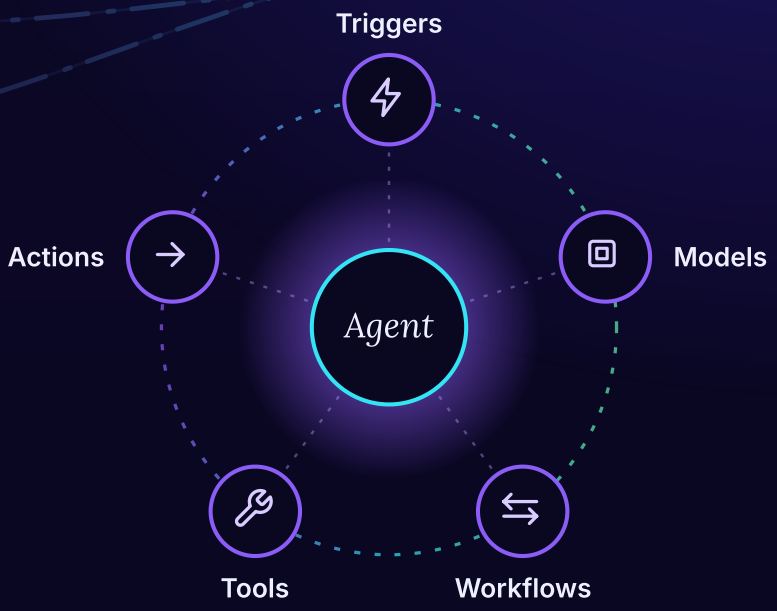

```
trigger a student submits a form
ai reads it and tags the topic
decide urgent? yes: alert, no: queue
action send a reply, save the record
```

You understand the basic architecture of an AI-powered workflow and how its components connect. Modules 1 to 5 in your resources

The ensemble

What makes an agent?

Five parts play together. Take one away and the music stops.

Triggers	The event that starts a run: a form, a message, a schedule.
Models	The AI that reads the input and decides what it means.
Workflows	The steps and rules that route work from start to finish.
Tools	What the agent can use: search, forms, apps and data.
Actions	What finally happens: send, save, update or reply.

Movement III · Day 3

Conduct Your Own AI Agent

Full day (proposed)

1 **Problem and team formation**
A practical problem is introduced. Teams form, pick a manageable solution and define the user, the workflow and the outcome.

2 **Build the prototype**
Create a simple web interface with AI-assisted development and an agentic workflow from a prepared tool or template. Use simulated data where live integrations are unavailable.

3 **Test and improve**
Test the whole user journey, fix workflow errors, improve the interface and prepare a short live demo.

4 **Final showcase**
Present your problem, solution and working prototype in a short live demonstration.

In every demo, show

- What the AI does
- What the workflow executes
- What remains simulated

Judging is optional and subject to club approval.

After you register

Your resources

One folder per day. Open them from the resources section of the event website.

Day 1 HANDBOOK

- **UI & Web Dev Handbook** · tools, prompt structure, AI IDEs, component libraries

Day 2 MODULES 1–5

- 1 · Introduction to AI Agents
- 2 · Agent Abstraction
- 3 · How Agents Work
- 4 · Agents in Action
- 5 · Course Wrap-up

Day 3 HACKATHON

- ***Hackathon brief*** · *shared before Day 3*

Ready?

Three steps to your seat.

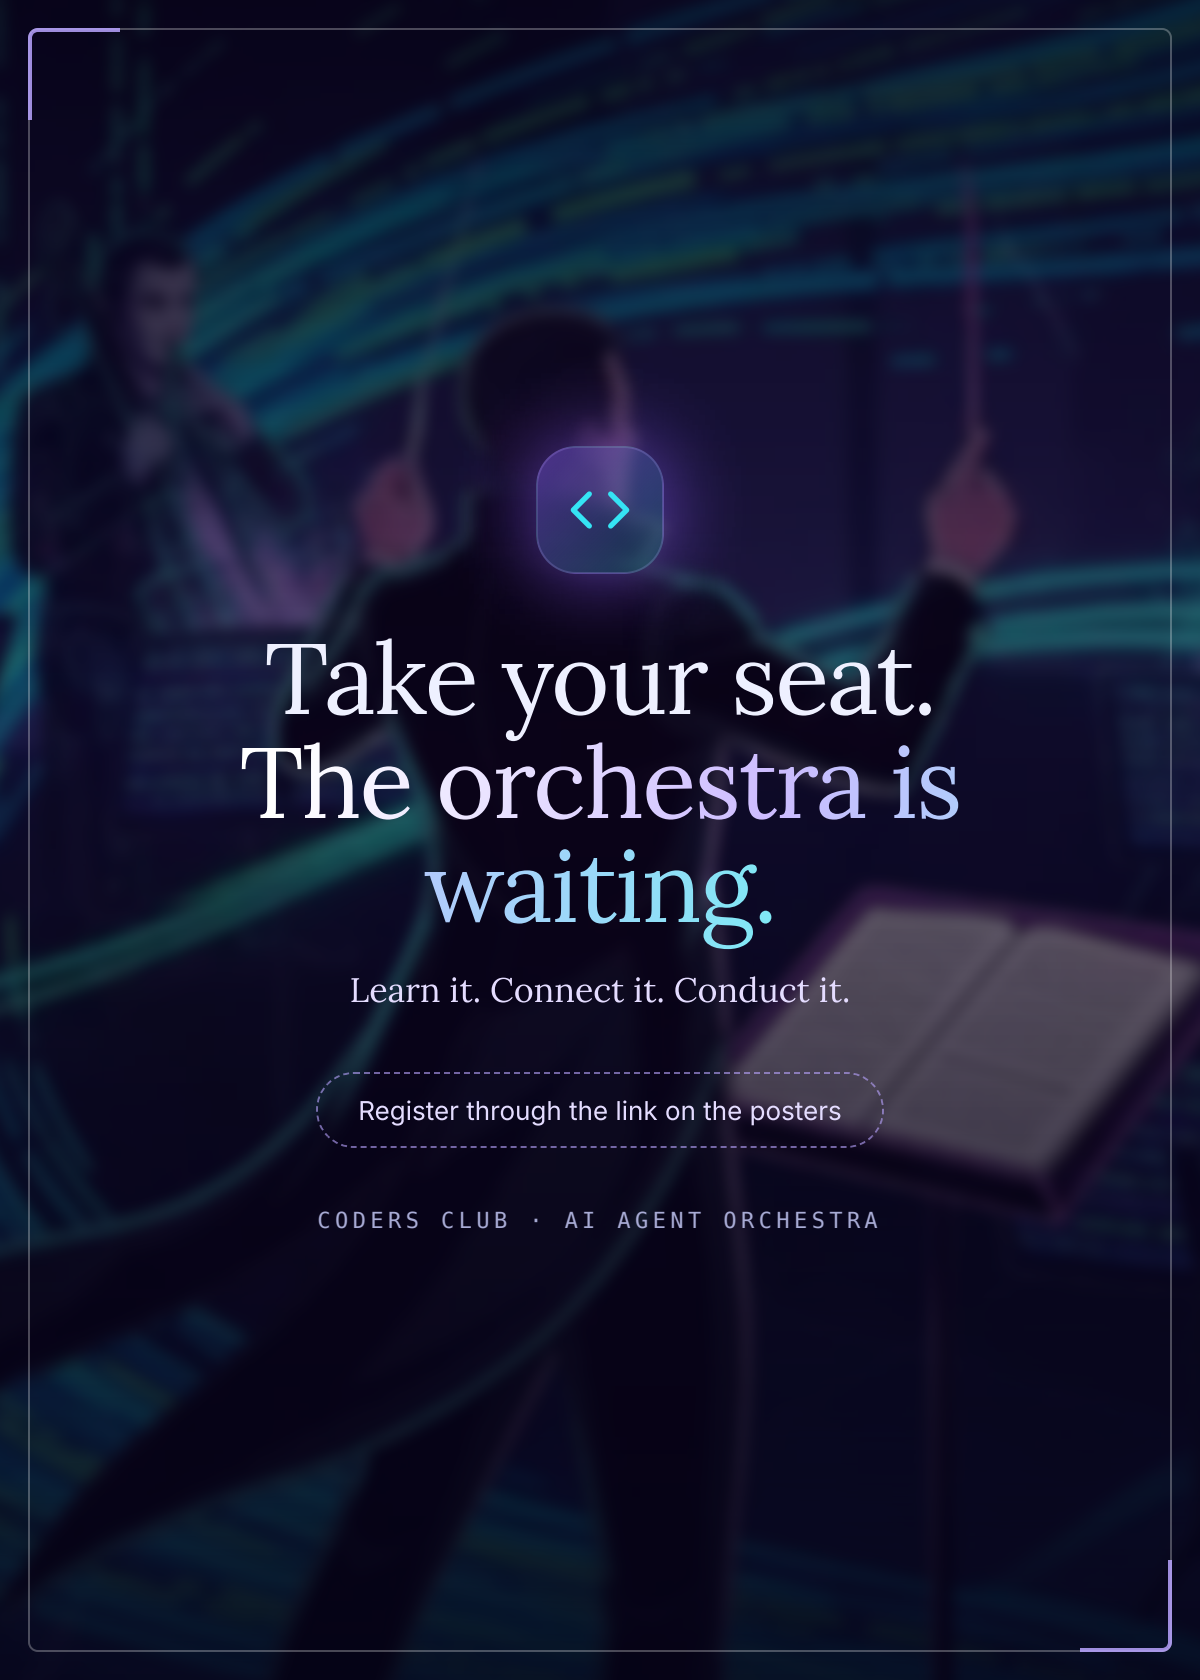

1. **Register**
   Registration is a Google Form, shared through QR codes and links on the posters.

2. **Warm up with the Day 1 Handbook**
   Open it, try one prompt and see what the AI builds. No experience is needed.

3. **Watch for the dates**
   Dates and venue are shared with registered students as soon as they are fixed.

For students | Dates: to be announced | Venue: to be announced

Good to know
You do not need to be an expert. You need curiosity and a laptop, and you will leave with something you built.

Take your seat.
The orchestra is
waiting.
Learn it. Connect it. Conduct it.
Register through the link on the posters
